**Description:** WE SECURE COMPUTER TO COMPUTER COMMUNICATIONS (NODE TO NODE) THE ONLY KNOWN COMMUNICATIONS-SYSTEM THAT:  
(A) REINFORCES CLIENT-SECURITY BY OBSTRUCTING ALL COMMUNICATION BETWEEN A ROGUE CHIP AND ITS CRIMINAL HOST (OTHER EXISTING SYSTEMS, IN RESPONDING TO AN ATTACK PROBE WITH AN ACCESS-DENYING MESSAGE, CONFIRM THE VERY PERVIOUSNESS OF THEIR PORTS). SUBSCRIBERS TO STTARX EFFECTIVELY "DROP OFF THE RADAR" BY WITHHOLDING RESPONSE TO UNAUTHENTICATED INBOUND NETWORK MESSAGES AND BLOCKING ALL UNAUTHORIZED OUTBOUND COMMUNICATION ATTEMPTS;  
(B) DOES NOT USE A STATIC ALGORITHM. THE TECHNOLOGY ROTATES THROUGH MULTIPLE ENCRYPTION ALGORITHMS, KEYS, AND KEY-LENGTHS USED FOR ENCRYPTION AND DECRYPTION AS OFTEN AS EVERY SECOND; THE SPREAD-SPECTRUM IMPLEMENTATION OF MULTILAYERED, PERPETUALLY DIFFERENTIATING ALGORITHMS AS WELL AS CHANGING KEYS CONSTRUCT A DEEP, COMPLEX, AND UNBREACHABLE SECURITY-"CLOAK" AROUND CLIENT-COMPUTERS ON A NETWORK.
